Cloudbase
A SyntheSys Solution

Cloudbase: Flexible Delivery for IBM Rational Toolset

Software delivery is changing. With an ever increasing number of organisations adopting a flexible approach to how they manage software development and delivery, it's crucial that flexible mechanisms support this infrastructure.

Welcome to Cloudbase, SyntheSys' Software-as-a-Service licensing toolset for IBM Rational Software. Gone are the days when software was purchased on an annual basis using unreliable usage forecasts, software licences can now be rented 'on demand', matching actual usage with actual licences.

So what are the tools?

Cloudbase focuses on the best in Requirements Management, Design Management, Validation Management and Project Management to accelerate effective software and systems delivery which fundamentally improves output quality.

Cloudbase RM:
Requirements Manager

Requirements Management, Definition & Engineering practices are the foundations of project success. With a cost incur of up to 60% as a result of poor requirements management practices, it's easy to see why IBM DOORS, IBM DOORS NG best practices in Requirements Management is proven to save time and money.

Cloudbase PM:
Project Manager

Built around IBM Rational Team Concert, CloudbasePM offers Change, Configuration and Release Management solutions which improve quality, increase productivity, unify work teams, automate development processes and provide traceability across the software development life cycle.

Cloudbase DM:
Design Manager

Our Design & Release Manager module pioneers IBM Rational Rhapsody to provide collaborative design and development for Systems Engineers and Software Developers creating real-time embedded systems and software.

Cloudbase VM:
Validation Manager

CloudbaseVM facilitates Testing & Validation Management which transforms the way teams work together to deliver enduring quality across the software delivery lifecycle from requirements, development, validation assurance, security and compliance to deployment. All this is done using proven IBM Rational Validation Manager functionality.
