

## Overview

Cloudbase Validation Manager (VM) facilitates management of testing and validation, transforming the way teams work together to deliver quality across the systems engineering lifecycle from requirements capture, verification, validation, to deployment.

### A Flexible Approach to Your Validation Management

Cloudbase VM utilises the flexibility and versatility of Cloud computing to provide IBM Rational Quality Manager in a more economical, adaptable way. Building on your existing skill set and processes, we take a mix of powerful IBM tools, flexible licensing options, and sound experience to manage, support and enhance your development lifecycle.

### A Whole New Dimension of Validation

Imagine if you could create test plans which clearly describe project goals and exit criteria, whilst tracking responsibilities and prioritised items for validation. Would you benefit from a testing solution that offers two dashboard views: A work item list shows the tester's assignments; and a team event log tracks the team's progress. Cloudbase VM allows users to seamlessly share project information and status updates, so that team members can synchronise teamwork throughout the lifecycle. In addition, you can automate tasks which help to reduce labour intensive activities and accelerate project schedules. Finally, you can understand and report on project metrics to enable accurate, reliable and timely release decisions.

## Features

- Customisable test plans.
- Capture test cases and link them with requirements, defects, development work items & builds.
- Facilitate collaboration between distributed test teams using the power of Cloud computing.
- Author and execute manual test scripts or launch automated test execution tools.
- Provide up-to-date project validation status tailored to individuals using customisable dashboards.
- Test Lab management capabilities using physical and virtual lab assets.
- Real-time project metrics.

## Benefits

- Promotes quality-driven software and systems delivery.
- Collaborate your teams.
- Automate your Validation Management & test procedure.
- Track, schedule and execute tests more effectively.
- Govern your projects more effectively.
- Increased team visibility.
- Enhances manual test authoring procedure.

## About SyntheSys

We provide Military Systems, Training, Software Engineering and Technical Management Services over a spectrum of different industry sectors. Along with our distinct support and consultancy services, our innovative product range makes us first choice provider for both large and small organisations.
